

Heading: Spring #1 Report
product name: Homepage
team name: Team HanDLe.cs
date: 10/28/14

Actions to stop doing:

- Stop procrastination, as this will delay our project and push many things until later, causing a mess and disorganization.
- Stop coming late to meetings, since it is a waste of time and our team members have other important duties to attend to, such as an incoming class or appointment.
- Stop pushing broken code and commit that to github. This causes problems with our code, such as merging problems and overwriting.

Actions to start doing

- Start working earlier, placing the project as higher priority than before. This ensures that we have time to polish our sprint/product later on.
- more communication, not just talking, but through code, via writing comments in the code for clarification purposes.
- Learn jQuery.

Actions to keep doing

- Keep meeting every SCRUM meeting, 3+ times every week.
- Keep being active on Skype. Live communication. It proved to be very effective for us.
- Keep learning Ruby on Rails, keep up with the latest tech.

Work completed/not completed

- draggable static images grabbed from given URL - completed
- register/login UI – completed
- add/delete URL – completed
- full database – not completed

Work completion rate

4 user stories completed.
Work done: 50+ hours (includes studying framework)
Sprint duration: 2~3 weeks
Ideal work hours: 25 hours
